

mobile phone and computer forensic specialists

Cell Site Analysis

MD5 provide a Cell Site Analysis service to all clients. We work closely with all of our legal sector clients, offering expert advice and providing a confidential and discreet service. We can offer you the following:

- > Conduct a cost effective desktop review to analyse and map the historical movement of the phone in question, focusing in on places and times of interest.
- > Conduct on-site cell site analysis network readings and radio surveys to determine if a particular mobile phone mast could have provided service on a particular occasion.
- > Review prosecution reports and statements, commenting on and/or challenging their findings.

All MD5 employees are security cleared and all analysis of evidence is conducted in our secure premises in Normanton West Yorkshire. We have considerable experience in investigating a large variety of cases, from one individual mobile station to multiple mobiles and cells. We also offer an urgent service capability to cater for priority cases.
